

**Announcement for Immediate Release
October 1, 2006**

North Kansas City, Missouri, Mobile Hydraulic Equipment Co, has announced a new product brand umbrella for its unique line of multipower systems.

HIPPO multipower systems include the full menu of the MHE products which generate air, electrical and hydraulic power to operate heavy duty industrial tools.

The HIPPO lineup offers output capacities of 4KW to 12KW of electricity, 30cfm to 185cfm of air and up to (3) hydraulic tool circuits at a maximum of 30gpm. Applications range from light duty service & repair functions requiring air, electrical and hydraulic power, up to heavy public utility and highway construction work.

The unique feature of HIPPO products is that various types power output can be delivered simultaneously using either the truck's engine or a separate diesel power plant. Truck mounted versions can operate off of the largest commercial vehicles, down to ½ ton diesel pickups. The separate engine version can be transported in a small trailer or placed in the bed of a pickup.

HIPPO products reduce the equipment at a job site, cut capital investment and operating costs and create a safer, more efficient work environment.

For more information on HIPPO Multipower Systems visit www.multipower.us or contact MHE at 800-844-0624.
