*HIPPO Multi Power announces a solution for limited PTO access on
2007 exhaust systems*

North Kansas City, Missouri: Mobile Hydraulic Equipment reports tremendous interest in the HIPPO line of multipower products.

One of the primary benefits of this multipower concept is the ability to utilize a single PTO. PTO availability is a major uncertainty created by the pending chassis changes, specifically the 2007 diesel engine emission standards. Diesel Particulate Filters/After Treatment Devices may create a situation where one of the transmission PTO openings is no longer accessible, forcing body-builders/installers to build multipurpose, multipower trucks with a single PTO.

The HIPPO family of multipower units delivers electrical, pneumatic and hydraulic power, simultaneously, for continuous duty operation, using only the chassis's diesel engine. All of these features can be driven by a single PTO. MHE has 20 years experience in the multipower field.

Numerous dealer/distributors and truck body OEMs view the HIPPO multi power concept as a solution to this perplexing problem.
